

Fact Sheet November 2017

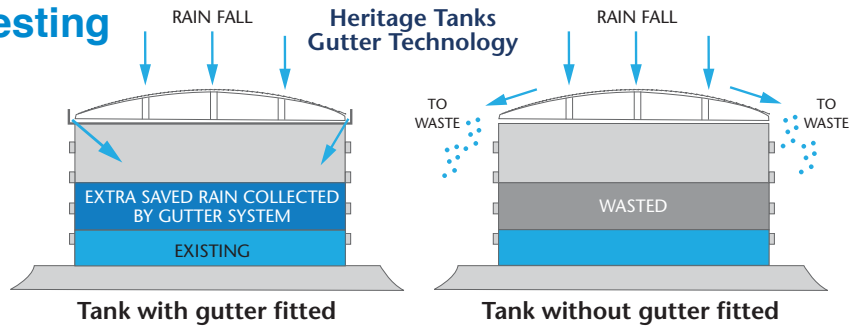

Gutter System

A revolution in rainwater harvesting

Heritage Water Tanks developed a unique patented water collecting Gutter System which allows customers to collect additional water each year from their tank roof.

This proven system has been in production for over ten years.

How does it work?

- With the gutter system fitted, all the rain that lands on the tank roof is directly diverted into your tank via the patented gutter system.
- The circular tank gutter system can be optionally fitted onto your Heritage Water Tank when your new tank is installed.
- The gutter can also be fitted to most other existing steel tanks with a profiled roof, depending on how the liner is fitted in the tank. This is an easy D.I.Y. project or by a plumber or tank installer.
- Our Gutter System also helps to prevent erosion around the base of your tank due to scouring from heavy rainfall.

How much extra water can I collect?

In a 500mm rainfall zone, you can save up to an extra 25,000L each year!

(Based on a 110,000L rainwater tank)

GUTTER CATCHMENT CHART - Litres harvested

Model	Litres	Diameter	250mm/A	500mm/A	750mm/A	1000mm/A
HGT285/CT60	285,000	12.55m	31,500	63,000	95,500	124,000
HGT250/CT55	251,000	11.77m	27,500	55,000	82,500	110,000
HGT220/CT48	220,000	10.99m	24,000	48,000	72,000	96,000
HGT160/CT35	160,500	9.41m	17,500	35,000	52,500	70,000
HGT135/CT30	135,000	8.63m	15,000	30,000	45,000	60,000
HGT110/CT25	111,500	7.84m	12,500	25,000	37,500	50,000
HGT90/CT20	90,500	7.06m	10,000	20,000	30,000	40,000
HGT55/CT12	55,000	5.49m	6,000	12,000	18,000	24,000

Gutter System Management

Heritage Water Tanks does not encourage customers to install the Gutter System in locations that are adjacent to or under trees and it is common for leaves to be collected in the gutter on your tank roof.

The Heritage Water Tanks optional Gutter Guard is an aluminium mesh designed to cover the tank roof and the gutter system. This will help prevent leaf matter from collecting in the gutter.

(Maintenance for your roof gutters will need to be undertaken as required.)

Customer Testimonial

Sam and Brett Harnett from Roelands in South West WA had a Gutter System fitted when their 155,000L rainwater tank was installed back in 2009 and it's still going strong, with minimal maintenance needed over the years. "We've definitely collected more water with the Gutter System installed. We never run out of water and are confident that we would still have a significant amount of water available to use in the event of having to face a bushfire."
