

GUTTER SYSTEM BENEFITS

WATER QUALITY

To collect the best quality rainwater, you must be able to effectively manage the water flowing into your water tank. Preventing as much dust, leaves, pollen and ash from fire as possible from entering your tank is important for quality water supply.

QUALITY GUARANTEED

The EvaRain Circular Tank Gutter System design is a world first. Like no other tank gutter system, you can filter your water before it enters your tank. It also has the ability to divert sediment laden first rains from your tank storage.

HOW TO CONTROL WATER QUALITY FLOWING INTO YOUR WATER TANK THROUGH THE SEASONS

SUMMER

Dust and Pollen

In summer, ensure that your filter is turned to the inverted 'off' position, to ensure that dust and other sediments are not flushed into your tank during light summer rains.

AUTUMN

Dust and Pollen

After opening rains or when you clean your water tank roof, you can turn the filter back to the 'on' position, to allow clean water into your tank.

WINTER

Collect Clean Fresh Water

Turn filter to the 'on' position, to allow clean rainwater into your water tank. Remove any leaves or debris intermittently as they accumulate on top of the mesh filter.

SPRING

Blossoms and Pollen

You can minimise heavy burdens of tree blossoms and pollen from entering your water tank by cleaning your mesh filter on a regular basis.

THINGS TO KNOW ABOUT OTHER PRODUCTS IN THE MARKET

Other tank roof catchment systems do not have the ability to divert the water away from entering the tank. Dust, smoke ash, pollen and foreign matter all have the potential to end up in your water storage. Other issues that may occur are cleaning the flower blossom and pollen out of multiple small inlets during the Autumn.

CIRCULAR TANK GUTTER SYSTEM

GUTTER SYSTEM OPTIONAL EXTRAS

TANK ROOF SEAL

*Seal
your water
tank supply*

Completely seal your tank and still catch water from the roof of your water tank. This product prevents access to mosquito's and frogs, ensuring a healthy water supply.

GUTTER GUARD

*Prevent
leaves
and debris*

Gutter Guard is available to prevent most leaves from entering the tank gutter, particularly when tanks are located adjacent to trees.

HOUSE OR SHED FIRST FLUSH SYSTEM

*90mm
First Flush
System*

The EvaRain Gutter System accommodates the 90mm First Flush System, which can divert the first rains to waste from your house or shed roof. Sold by rainharvesting.com.au

EvaRAIN - HOW IT WORKS

Roof Gutter System

The EvaRain Gutter System collects additional water from the roof of your tank and has the benefit of being able to flush the first rains via a specially designed inlet and filter system. A World First and unlike any other option available in the market.

Filter in engaged position

When the filter is in the 'Engaged' position with the filter facing upwards, water that falls on your tank roof can enter the tank via an inlet. The water is also screened by a 0.95mm stainless steel mesh to prevent mosquitoes and debris from entering your tank.

Flush tank roof and gutter

To flush the tank roof and gutter prior to the first rains, unlock and pull the Filter Screen away from the tank inlet and turn 180°. Push the filter coupling back to engage with the tank and lock into place.

Filter in flush position

Any rain that falls on the tank roof when the Screen Filter is in the flush position will be diverted to stormwater and leaves and debris will be flushed away. After the tank roof has been sufficiently flushed, the screen should then be set back into the 'Engaged' mode.
